

The first floor above the viaduct is a continuous walkway connected by ramps, stairs, elevators or ramps, which is supported by the viaduct, walkways are part of residential units of the upper level. The site access information can be used for commercial projects.

VIADUCT MIXER 2: STRATEGY

Several locations along the viaduct are marked as potential programmatic focal points. In these locations, the process of modifying the generic ring is amplified to become a public space that responds to program to existing program and needs. To demonstrate the concept I have designed a mass school, which would be an educational focal point on a site where several focal points already exist.
